### **New bibliographic database for ornithologists**

The BOU, AOU, and Birds Australia are proud to announce the replacement of Recent Ornithological Literature (ROL) with the new Worldwide Ornithological Literature (OWL). OWL is an indexed bibliographic database of citations from the worldwide scientific literature that pertain to the science of ornithology. OWL deals almost exclusively with serial publications. The new database is accessible at [www.birdlit.org](http://www.birdlit.org) at no charge. OWL's scope will be more than just the "recent" literature of ornithology. Eventually, the goal is to have the online database go back 50 or more years for citations to the serial literature.

OWL also asks for citations for all recent doctoral dissertations and those papers published in obscure serials not usually covered in OWL. Anyone interested in helping should contact Jay Sheppard, Managing Editor ([JMSheppar@aol.com](mailto:JMSheppar@aol.com)) or Bob Dowsett, Afrotropical Coordinator ([Dowsett@aol.com](mailto:Dowsett@aol.com)), for a list of journals needing abstractors and other information. Abstractors should ideally have access to a computer and their assigned journals.

Over 1100 serials have been cited in ROL/OWL since 1990. In a sample, 24% were exclusively ornithological in scope, 73% were not and 3% were undetermined. Bibliographies from forty *Birds of North America* life history accounts were evaluated. Of the 5442 total citations, 66% were serials. A comparison revealed that 59% of the serial citations should have been found in *Biological Abstracts* and approximately 96% should have been found in the ROL. These numbers are only for comparative purposes, as many papers preceded both indexes by decades, if not a century or more. The commercial abstracting services charge a considerable fee for their services, while OWL is free to any Internet user. The database will be expanded
