RINGING IN NIGERIA, 1970

13th Annual Report

by

R.E.Sharland

Ringling in Nigeria during 1970 totalled 3,517 birds, mainly due to the efforts of Dr. and Mrs.J.A.Broadbent. They ringed 1,898 wagtails at the Ibadan roost and also ringed a number of waders and other birds during a Christmas expedition to Lome in Togo.

The Kano wagtail roost dried up as a result of the long dry season but I found a better patch of Acacia staxacantha outside Kano for the autumn passage. I ringed 350 migrants in October and November; this is approximately the same number of birds per net-length as were caught by R.J.Dowsett at Mallamfatori in the autumn of 1968.

David Lewis went to Mallamfatori in March. He stayed at the regional Fisheries Research Station where there is not as much Salvadora as at the Federal Station so was not able to ring substantial numbers. Dr.J.R.Lang was too busy to ring at Vom but has resumed again in 1971.

The numbers of wagtails ringed in Finland and controlled at Ibadan is significant and it is of interest that another Finnish bird was controlled at Kano at the end of April 1971.

Scientific nomenclature follows White, C.M.N. (1960-65) Check List of African Birds, Lusaka, Zambia.

A NEW SUBSPECIES OF FRECKLED NIGHTJAR  
IN NIGERIA.

by

Roy H. Parkor.

Caprimulgus tristigma pallidogriseus Parker and Benson (1971) has recently been described from five specimens collected in Nigeria. The following note is included here in the hopes that more information concerning the Freckled Nightjar in Nigeria can be gleaned from members of the Society who are not aware of this recent discovery.

White (1965) recognises three races of tristigma (tristigma, lentiginosus, sharpei) whilst Parker and Benson (op.cit.) consider that Clancey's (1965) description of a fourth race, granosus, is fully justified.

The detailed study of 92 specimens of C. tristigma collected from all parts of Africa within its range led to the following conclusions.

- (I) Caprimulgus tristigma tristigma Ruppell, 1840.  
Wing: 168-187mm. mean: 178.5mm (37 specimens)  
Range: Tanzania N. of 5°S., Ruanda, N.E. Congo (Upper Uele), Uganda, Kenya, Ethiopia and S. Sudan.
- (II) Caprimulgus tristigma lentiginosus Smith, 1845  
Greyer than tristigma and averages larger.  
Wing: 178-196mm. mean: 188.6mm (9 specimens).  
Range: South West Africa.
- (III) Caprimulgus tristigma granosus Clancey, 1965.  
Darker and greyer above than lentiginosus and lacking the buffy or vinaceous tones, and decidedly less buffy below.  
Wing: 182-196 mm. mean 187.6 mm. (41 specimens).
