CORRECTIONS TO THE LIST OF BIRDS SEEN ON
MOUNT CAMEROON

I am very grateful to Dr.W.Serle for querying the identification of two of the species that I listed in the earlier note (Grimes 1971) and for confirming their re-identification. These corrections are as follows:-

1. Cameroun Swamp-Warbler Bradypterus camerunensis:
This should read Kivu Swamp-Warbler Bradypterus brachypterus centralis. The field notes I listed are described in Bannerman (1953) for this species and were overlooked by me. Dr.Serle writes "Bradypterus brachypterus inhabits the rank herbage of the clearings of the lowland forest round the base of the mountain from the sea up to Buea. The mountain forest Bradypterus is B.barratti camerunensis".

2. Baglafect Weaver Othyphantes baghafect:
This should read Grey-backed Weaver Symplectes amaurocephalus. My field notes which were not given in the earlier note are as follows: black head, dark mantle and black tail, all yellow underparts and undertail coverts. Call notes reminded me of Malimbus species.
